

HAMJA SIDDIQUI

Aspiring Data Scientist

7841884689 ◇ Nagpur, Maharashtra

hamzasiddiqui7845@gmail.com ◇ [Linkedin](#) ◇ [Portfolio](#) ◇ [Github](#)

PROFESSIONAL SUMMARY

B.Com graduate skilled in EDA, predictive modeling, and dashboard development using Python, SQL, and Power BI delivering ROC-AUC: 0.776 and R^2 : 0.923 across real-world projects. Proficient in data cleaning and feature engineering to uncover hidden patterns. Seeking a Data Science role to transform complex datasets into insights.

EDUCATION

Bachelor of Commerce, RTMNU University
Commerce & Management (CGPA 6.5%)

completed May-2025

SKILLS

Technical Skills :	Python (Pandas, NumPy, Matplotlib, Seaborn), ML (Regression, Classification)
Analysis :	Data Collection Statistical Analysis, Data Cleaning, EDA, Data Preprocessing, Trend Analysis
Databases	SQL Queries (Joins, Subqueries, Aggregations), Data Extraction, Data Transformation
Visualization :	Power BI (DAX, Predictive analysis, dashboards development, reporting), Tableau, Excel
Soft Skills :	Analytical Thinking, Problem Solving, Communication Skills, Interpersonal Skills.

EXPERIENCE

Data Science Consultant, Intern
Rubixe AI Company

Jan 2026 - May 2026

- Collaborated with the team members to understand client requirements and business challenges. Worked on a client project where machine learning algorithms like decision tree, random forest algorithm were applied and achieved 92% test accuracy. Played a role in the project team and ensured timely submission of the projects.
- Constructed predictive models using machine learning algorithms, including Logistic Regression and Multiple Linear Regression, achieving an accuracy rate of 90% in attributing revenue and conversions to specific marketing touch points.

PROJECTS

Home Credit Default Risk Prediction. — Python · SQL · LightGBM · Scikit-learn — [Project-Link](#)

- Merged 7 banking datasets (45M+ rows) into single modeling dataset with 231 features using SQL and Pandas.
- Handled class imbalance, missingness flags, and domain-specific feature engineering to build a clean pipeline.
- Achieved ROC-AUC: 0.776 using tuned LightGBM — correctly identified 70% of actual loan defaulters.

Vendor Performance Analysis — Python · SQL · Power BI · DAX · EDA — [Project-Link](#)

- Built automated ingestion pipeline loading 6 CSV files into SQLite database using Python and SQLAlchemy.
- Identified top 10 vendors contributing 66% of purchases — flagged supply chain dependency and 72% unit cost.
- Applied hypothesis testing (t-test) confirming statistically significant profit margin difference across vendors.
- Developed Power BI dashboard with DAX measures — visualized vendor rankings and supply chain risks.

CERTIFICATIONS

Certified Data Science Program
DataMites

Sep 2025 - Jan 2026
